

Joshua Edwards

Entrepreneur, business owner, college grad, extraordinary software developer and engineer lead looking for an occupation in the software development/aerospace /IT/tech fields with an emphasis on software systems and development.

EXPERIENCE

Colorado Homeschool Enrichment, Colorado Springs, CO — Systems Engineer Tech Lead, August 2025 – Current

As Systems Engineer Tech Lead, I lead Colorado Homeschool Enrichment's technology team, running weekly standups and mentoring and overseeing engineers and interns. I own the organization's AWS architecture and security posture, drive technical planning and system design for new enrollment platforms, and serve as the primary technical decision-maker across cross-functional projects, building on my prior work as a Systems Developer.

Colorado Homeschool Enrichment, Colorado Springs, CO — *Systems Developer, April 2024 – August 2025*

As a Systems Developer at Colorado Homeschool Enrichment, I have extensive experience in designing and implementing scalable solutions using AI LLMs, AWS, Airtable, Python scripts, webhooks, and HTTP programming. My role involves developing, testing, maintaining, and refactoring critical websites, creating and maintaining automation processes, integrating cloud-based systems with Airtable, and developing custom Python scripts to optimize data workflows. I also work to enhance system reliability and performance by leveraging AWS services, ensuring seamless data integration and efficient automation across the organization's platforms. I oversee interns and train them.

Rooted Software, Colorado Springs, CO — IT Service Desk Technician, Feb 2023 - August 2023

Learned to troubleshoot and problem-solve comfortably, confidently, and independently. Responsible for client communication and satisfaction, understanding technical problems and simultaneously finding the solution. Worked on PCs with Microsoft 365 and Azure environment, Google Admin environment, activate directory, and networking and hardware infrastructures. Was responsible for in-person client office where I attended to clients physically and performed necessary operations like troubleshooting and moving equipment. Actively worked to increase security and dealt with security breaches in a professional manner. Responsible for Help Desk telephone line and answered live calls to assist clients.

Odd Job Bros, Colorado Springs, CO — Owner, Manager

July 2018 - PRESENT

At 14 years old, started a small yard work and house maintenance business. Grew the business to include over 50 households and two employees. Learned great customer relations, time management, creativity and problem-solving, and general house maintenance concepts. I plan to maintain this business throughout college.

SOFT SKILLS

"I may not know how, but I'll find a way" attitude

Loves to learn, receive correction and coaching

Exceptional communicator

Superior problem solving skills

Enjoys working on teams

Proficient with most computer software

Quick learner

Diligent worker

Passionate about all things space

HARD SKILLS

Platform Engineering

Artificial Intelligence (AI) systems

AWS full stack systems development

Masterful with Python scripting language

Proficient with Git, GitHub, version control systems

Experience working in Agile Framework development cycles

Experience refactoring code

Mobile Screen Repair, Colorado Springs, CO — Employee

March 2022 - August 2022

Apprenticed and worked for six months while learning how to repair broken window screens. Learned screen repair and good customer relations as well as general house maintenance concepts.

Freedom School of Martial Arts, Monument, CO— Employee

December 2020 - April 2022

For two years, I was in charge of cleaning and sanitation for daily classes at the Freedom School of Martial Arts. The owner entrusted me with keys to the dojo and cleaning and maintenance throughout the week.

EDUCATION

University of Colorado Colorado Springs — Computer Science

August 2023 - Current

Graduated with an ABET Accredited Bachelor's Degree in Computer Science at UCCS. Relevant classes include a multitude of advanced computer science and software development-based courses as well as Calculus up to Calculus 3 level including vector calculus, vector-valued functions, partial and multiple derivatives and intervals. Linear Algebra and Discrete mathematics as well as advanced Calculus-based Physics.

Pikes Peak State College — Associate's Degree in Computer Science

August 2020 - May 2023

Associate's Degree in Computer Science and a 4.0 GPA while maintaining concurrent enrollment classes at The Classical Academy high High SchoolA College Pathways, Colorado Springs — High School

August 2018 - May 2022

Graduated with a 4.0 GPA and recognition from the National Honor Society.

ARTIFICIAL INTELLIGENCE INTEGRATION

- Leveraged AI tools and models to enhance development processes, improve productivity, and streamline workflows.
- Automated repetitive tasks such as code reviews, debugging, and testing using AI-driven platforms, allowing for increased focus on complex problem-solving and innovation.
- Improved learning efficiency by utilizing AI systems to quickly acquire new concepts, programming techniques, and technologies.
- Applied AI-powered solutions to optimize project management, track progress, and facilitate effective team collaboration.
- Enhanced software and system reliability by integrating AI-driven analytics into workflow monitoring and quality assurance processes.

PROJECTS

2024 - I developed a scalable, cloud-hosted course catalog application using Flask,

Mastered Microsoft systems, Office 365, Azure, active directory

Skilled in high-level, 3D, vector Calculus, linear algebra, discrete math, and advanced, Calculus-based physics

Programmer in C#, C++, C, Bash, Java, SQL, and Assembly Language

Airtable, SQL relational databases

Skillful in handyman and landscaping work

Fluent English, some Spanish

AWARDS

UCCS President's List award

Chancellor's Scholarship at UCCS

Associate's Degree in Computer Science at Pikes Peak State College

Certificate of Programming from PPSC

National Honor Society member

National Society of Leadership and Success nominee

Black Belt in Mixed Martial Arts, Blue Belt in Brazilian Jiu-jitsu

Numerous medals in Martial Arts tournaments

Gunicorn, and Nginx to manage and display educational course offerings. Hosted on AWS EC2, the project leverages Flask for backend API development and dynamic content generation, Gunicorn as the Python WSGI server for robust application serving, and Nginx as a reverse proxy to optimize performance and security.

Key features include:

- Cloud Infrastructure: Deployed on AWS EC2 with configured security groups, elastic IPs, and SSH access for seamless remote management.
- Application Scalability: Gunicorn configured for multiple worker processes, enabling efficient load handling.
- Optimized Delivery: Nginx reverse proxy setup for static file delivery and load balancing, ensuring fast and secure user experience.
- Automated Deployment: Bash scripts and configuration management for consistent environment setup and rapid redeployment.
- Database Integration: Supported integration with PostgreSQL for dynamic course data retrieval and management.

This project highlights expertise in cloud deployment, backend development, and production-grade application hosting, showcasing the ability to create and manage scalable web applications in a professional environment.

2024 - I have worked on many teams to plan, develop, troubleshoot, and maintain critical web-based software. I have played a major part in creating web-based SaaS applications that are both professional and effective all around. My specialty is full-stack AWS and Python/HTML architecture development with Git and Github versioning software.

2024 - As part of my UCCS degree, I have worked to develop from scratch a working Django-Python based app that interfaces with an SQL relational database. The app has full login and credential functionality with advanced object-based and role-based permissions and decorators. The database can be accessed and updated from the web app. I was responsible for creating all HTML pages, and Python programs to support the app. See personal website at top of resume for links to project demo.

2022 - I have worked with a team of other creators to design, create, code, refactor, and produce a working video game in 48 hours. We used Git and GitHub to collaborate on files for various departments (code, art and design, audio) to create a working game using the Unity game engine and C# programming language.

2023 - Worked to create a Python-based Matrix calculator with basic mathematical functions involving matrices. I saw a lack in this area of public tools and had a desire to fill that need. Basic functionality includes matrix operations like multiplication and dot and cross product.

SOFTWARE DEVELOPMENT LIFE CYCLE EXPERIENCE

I have applied an Agile development framework to design, create, implement, refactor, and to produce a working program that was functionally complete and correct. I have looked over my own work and added functionality while maintaining DRY (Don't Repeat Yourself) and SRP (Single Responsibility Principle) principles. I applied all six aspects of the SDLC: planning, analysis, design, implementation, testing & integration, and maintenance and received high praise for my work. See my GitHub link at the top of my resume to view my projects.
